

DETAILED PROCEDURAL GUIDE

Use workplace Copilot safely

Prompt clearly. Refine the result. Review before sharing.

Purpose

Use this guide when creating, catching up on, or asking about work with an approved Copilot experience. It gives a repeatable workflow; your organization's data-handling and platform policies still govern what may be entered or shared.

The operating rule

- You guide Copilot.
- Copilot can support the work; it does not replace review, judgment or accountability.
- When unsure, pause. Do not include the information until you confirm it is permitted.

1. Before you prompt

- Confirm the source is approved for this use.
- Remove information that is not permitted in the selected Copilot experience.
- Know the audience, purpose and required output before you ask.

2. Build the prompt with GCSE

Element	What to provide
Goal	The task Copilot should help complete.
Context	Audience, purpose and relevant background.
Source	The approved information Copilot should use.
Expectation	Format, tone, length and other success criteria.

Prompt starter

Help me [goal] for [audience and purpose] using [approved source]. Return [format, tone and length].

3. Choose a safe use pattern

Create: Draft or revise an email, summary or update from approved source material.

Catch up: Summarize a permitted meeting, message thread or document.

Ask: Explain, compare or organize approved information.

4. Refine in the same conversation

Treat the first output as a draft. Give a focused next instruction instead of starting over.

- Make this shorter.
- Focus on decisions.
- Rewrite for a leadership audience.

5. Review before sharing

- ☐ **Accuracy:** Compare key facts, names, dates, calculations and citations with trusted sources.
- ☐ **Fit:** Confirm the audience, tone, format and purpose.
- ☐ **Data:** Follow your organization's data-handling guidance; remove disallowed information.
- ☐ **Judgment:** Decide whether the result is complete, appropriate and ready to share.

6. Respond to a policy or platform warning

- Stop and read the warning.
- Do not dismiss it automatically.
- Adjust the prompt or content as directed.
- Follow the applicable organizational and platform guidance.

Worked example

Weak: "Summarize this."

Better: "Summarize the key decisions from this approved meeting thread for a team update. Return five plain-language bullets and include action items."

Five-second final check

- Is the prompt clear?
- Did I include enough approved context?
- Do I understand the output?
- Did I review it before sharing?

Boundaries and escalation

This source does not name a universal escalation contact. If approval, data handling or a warning remains unclear, stop and use your organization's established policy or support channel. Do not invent a workaround or include the information while approval is unresolved.

Source and maintenance

Source: Copilot Expansion: Week 1 Safe-Copilot, v2.0 (updated June 2026). This public-sanitized pilot derivative removes organization-specific names, contacts, member/customer categories and policy paths. Review the derivative whenever the approved source or governing policy changes.

Pilot acceptance checks

- Content traceable to the approved source.
- No organization-specific or restricted details exposed.
- Editable source and distribution PDF retained.
- Heading structure and table header verified.
- All rendered pages visually inspected.
